

Indonesia Regulated Industry Perspective

Transforming with Confidence in Highly Regulated Environments

Indonesia's regulated industries—banking, financial services, state-owned enterprises, and critical infrastructure—operate under constant oversight, strict compliance requirements, and low tolerance for disruption.

Digital transformation in these environments is **not about moving fast**. It is about **moving with confidence**.

At TCK, we help regulated organizations modernize operations while maintaining control, accountability, and regulatory assurance.

- TCK Orchestrates, Not Just Integrates
- Architecture Anchored in Visibility
- Governed for Sustained Execution

The Reality of Regulated Enterprises in Indonesia

Organizations in regulated sectors typically face a unique combination of challenges:

- ✓ Complex legacy environments spanning data centers, networks, and cloud
- ✓ Multiple technology vendors and delivery partners
- ✓ High audit frequency and compliance scrutiny

Strong dependency between IT services and business continuity

What This Enables for Regulated Organizations

- ✓ Respond to audits with clarity and evidence
- ✓ Execute changes with defined risk boundaries
- ✓ Reduce incident impact on critical services
- ✓ Modernize operations without compromising compliance

At TCK, we do not help regulated enterprises move faster at the expense of control.

We help them **move forward**—with clarity, governance, and confidence.

Because in regulated industries, confidence is the true accelerator.
